

## E-Z Glo

---

E-Z Glo Feed Mill Products are high energy liquid feed ingredients designed for the manufacturer who produces textured feeds. E-Z Glo has been developed to give textured feed a golden color, moist texture, and sweet aroma, and to reduce mold problems. E-Z Glo flows and mixes better than cane molasses in meal and textured feeds. It provides a sweet, natural aroma unlike many low-cost blends. E-Z Glo is more readily absorbed into meal-type feeds, reducing bulk bin hang-up and caking problems in bags. E-Z Glo reduces molasses/feed build up on equipment, and any build up that does occur is easier to clean. This can help reduce clean up and maintenance costs. E-Z Glo coats textured feeds more evenly than cane molasses or blends to give feed a consistent appearance with fewer dry areas and fines.

E-Z Glo is flexible. You may choose from a variety of preservation and mold inhibition packs, depending on climatic conditions, shelf life requirements and/or grain condition.
