

## E-Z Flo Feed Mill Products

E-Z Flo Feed Mill Products perform better than other molasses-type products, even in cold weather conditions because they do not require special handling or storage. E-Z Flo contains special ingredients that allow it to flow at low temperatures without applying heat or diluting with water. E-Z Flo improves the palatability and appearance of finished feeds and helps keep feedmills working more efficiently in cold weather. E-Z Flo is also available with E-Z Guard Preservative for improved mold control.

E-Z Flo flows and mixes better than cane molasses in meal and textured feeds. It provides a sweet, natural aroma unlike many low-cost blends. It is more readily absorbed on meal type feeds which reduce bulk bin hang-up and caking problems in bags. E-Z Flo reduces molasses/feed build up on equipment, and any build up that does occur is easier to clean. This can help reduce clean up and maintenance costs. E-Z Flo coats textured feeds more evenly than cane molasses or blends to give feed a consistent appearance with fewer dry areas and fines.
